## Strainers and Filters FI 6.06

### Stainless Steel Filter

#### Technical Data

Connection DN	15 - 50
Connection G	1/2 - 2
Nominal Pressure PN	16
Temperature	190 °C
Medium	gases and steam

#### Description

Filters are used to retain contaminants present in fluids.

FI 6.06 is entirely manufactured from deep-drawn stainless steel featuring excellent corrosion resistance. For this reason it is used for the filtration of corrosive gases and liquids.

Top and bottom sections of the valve body are connected by a clamp ring and two bolts. Servicing/maintenance is easy and does not call for special tooling.

Two different types of tube filters can be fitted in the filter body.  
 Type P: High quality pleated 3-ply filter element (fabric/metallic fibre fleece/ fabric)  
 Type S: Filter element made of sintered stainless steel

Low pressure loss and large dirt retention capacity ensure long life and minimise servicing and maintenance.

The filter may be cleaned by blowing through with compressed air or steam or flushing using a suitable cleaning agent. The best results are obtained by ultrasonic cleaning in an aqueous solution.

#### Standard

- » All stainless steel construction
- » Quick-release body clamp ring
- » Retained particle size: type P - 25 µm; type S - 20 µm
- » Drain plug in body bottom section
- » Bleed plug in body top section

#### Options

- » Retained particle size 5 µm for types P and S
- » Various seal materials suitable for your medium
- » Special connections: Aseptic, ANSI or DIN flanges, welding spigots; other connections on request
- » Special versions on request

Operating instructions, know how and safety instructions must be observed. The pressure has always been indicated as overpressure. We reserve the right to alter technical specifications without notice.

#### Resistance Coefficient $\zeta$

filter element type	filter mesh $\mu\text{m}$	nominal diameter	
		G 1/2 - 1 1/4 DN 15 - 32	G 1 1/2 + 2 DN 40 + 50
P	25	15	13
	5 (Sonder)	17	16
S	20	16	15
	5 (Sonder)	28	25

#### Permitted Pressure Drop [bar]

filter element type	filter mesh $\mu\text{m}$	nominal diameter	
		G 1/2 - 1 1/4 DN 15 - 32	G 1 1/2 + 2 DN 40 + 50
P	5/25 µm	16	5
	5 µm	12	11
S	20 µm	8	7

#### Calculating the pressure drop

$$\Delta p = \zeta \cdot \omega^2 / 2 \cdot \rho \cdot 10^{-5} \text{ [bar]}$$

$\zeta$  resistance coefficient (see table)  
 $\omega$  [m/s] flow velocity within the connection cross section (nominal diameter)  
 $\rho$  [kg/m<sup>3</sup>] density of fluid
